

UNIQUEWALL

STYLE YOUR SPACE, YOUR WAY.

Per produrre la maggior parte dei nostri prodotti utilizziamo alluminio riciclato, un materiale totalmente ecosostenibile ed ecocompatibile.

L'alluminio è un materiale straordinario in quanto può essere riciclato all'infinito senza alcuna penalizzazione qualitativa.

In tale senso l'alluminio è un esempio perfetto di economia circolare, una locuzione che definisce un sistema economico pensato per potersi rigenerare.

Quindi non siamo attenti solo al design e a produrre oggetti che siano belli, personalizzabili e unici ma vogliamo anche costruire i nostri prodotti in modo da salvaguardare l'ambiente che ci circonda**a**.

We use recycled aluminium, a totally sustainable and environmentally friendly material, to produce most of our products.

Aluminium is an extraordinary material in that it can be recycled indefinitely without any quality penalty.

In this sense, aluminium is a perfect example of circular economy, a term that defines an economic system designed to regenerate.

*So we are not only attentive to design and to producing objects that are beautiful, customisable and unique, but we also want to build our products in a way that protects the environment around u**S**.*

UNIQUEWALL

I nostri sistemi di rivestimento per pareti sono stati creati per trasformare gli ambienti interni ed esterni in modo immediato, originale e dinamico. Giochiamo con la tridimensionalità, creatività e casualità per personalizzare all’infinito i vostri spazi. Il rapporto tra ordine e caso è indefinito nei nostri sistemi di rivestimento.

Sono dei sistemi modulari installabili in ogni ambiente e con diverse nuance di finiture per personalizzare senza appesantire, sia in un’installazione a tutto muro sia a boiserie bassa. I moduli sono facilmente installabili, grazie alla leggerezza dei materiali impiegati e ad un sistema di fissaggio innovativ**o**.

Our wall covering systems are designed to transform the interior and exterior spaces an immediate, original and dynamic way. We play with three-dimensionality, creativity and randomness to endlessly customise your spaces. The relationship between order and chance is undefined in our cladding systems.

*They are modular systems that can be installed in any room and with different nuances of finish to customise rooms without adding weight, whether in a full-wall or low wall installation. The modules are easy to install to the low weight of the materials used and an innovative fastening system**m**.*

WISH, HALF WISH, TRIBE

Con le nostre doghe in alluminio autoportanti Wish, Half Wish e Tribe separiamo gli spazi senza confinarli.

Filtriamo la luce, dividiamo gli ambienti senza appesantirli e con essi creiamo ambienti decisamente scenografici lasciando molta autonomia al progettista che può scegliere a suo piacimento finiture, spaziatore e modalità di installazione. Possono essere installate sia in ambienti interni oppure in ambienti esterni.

Le doghe possono essere fornite in molte tonalità di colori verniciati a polvere epossidiche oppure in alcune finiture color legno.

Le doghe Wish e Half Wish possono essere installate in due modi: La prima alternativa senza dover forare il pavimento ma fissate allo stesso tramite biadesivo strutturale (se installate in posizione fissa). Se desiderate invece che possano girare di 180° devono essere installate forando il pavimento.

Per il modello Tribe invece è disponibile una sola modalità di installazione ovvero forando il pavimento.

Per tutti i modelli però non esiste nessun limite di spaziatura tra gli elementi che sono sempre a scelta del committente.

With our self-supporting Wish, Half Wish and Tribe aluminium slats we separate spaces without confining them.

We filter light, divide rooms without making them heavier, and with them we create highly scenic environments, leaving a great deal of autonomy to the designer, who can choose finishes, spacing and installation methods as he wishes. They can be installed either indoors or outdoors.

The staves can be supplied in many shades of epoxy powder-coated colours or in some wood-coloured finishes.

Wish and Half Wish slats can be installed in two ways:

The first alternative without having to drill holes in the floor but fixed to the floor using structural double-sided adhesive tape (if installed in a fixed position).

If, on the other hand, you wish them to be able to turn 180°, they must be installed by drilling holes in the floor.

For the Tribe model, on the other hand, only one installation method is available, namely by drilling holes in the floor.

For all models, however, there is no limit to the spacing between the elements, which is always the customer's choice.
